

MUHAMMAD USMAN

Network Security & Incident Response Candidate

Hyderabad, Pakistan | +92 327 9233925 | usmannizamani00@gmail.com | [LinkedIn](#) | [Github](#)

PROFESSIONAL SUMMARY

Motivated BS Cyber Security student (Final Year) seeking Summer 2026 internship in Network Security or SOC operations. **HCIA-Datacom certified** hands-on experience designing enterprise networks, conducting security analysis, and implementing defensive protocols. Proven ability to design high-availability systems achieving 99.99% uptime and secure inter-site connectivity using IPsec VPN.

TECHNICAL SKILLS

Network Security & Protocols: Firewalls (pfSense), Access Control Lists (ACLs), TCP/IP, DNS, DHCP, VLAN Segmentation, Zone-Based Policy Management, IPsec VPN (IKEv2/Phase 1 & 2), AES-256 Encryption

Network Redundancy & HA: VRRP (Virtual Router Redundancy Protocol), MSTP (Multiple Spanning Tree Protocol), HRP (Huawei Redundancy Protocol), Eth-Trunk (LACP), Sub-3-second Failover Configuration

Routing Protocols: OSPF (Area 0, Default Route Advertising), Static Routing, Dynamic Routing Configuration

Security Operations: Traffic Analysis (Wireshark), PCAP File Analysis, Log Analysis, Incident Response, Alert Triage, Simulated SOC Workflows

Compliance & Governance: SOC 2, ISO 27001, GDPR, HIPAA (academic coursework)

Network Design Tools: Huawei eNSP, Network Simulation, Enterprise Architecture Design

CERTIFICATIONS & TRAINING

- **HCIA-Datacom (Certified)** – Routing, switching, and network fundamentals
- **CNSP (Certified Network Security Practitioner)** – Network defense and secure architecture
- **HCIA-Security (Completed)** – Security management and network protection protocols
- **HCIA-WLAN (Completed)** – Wireless LAN security and configuration
- **Google Cybersecurity Professional Certificate (Aug 2025)**
- **Google AI Prompting Certificate (Aug 2025)**
- **TryHackMe Security Engineer Path (In Progress)** – PCAP analysis, SOC alert triage, incident response simulation

HANDS-ON PROJECTS & EXPERIENCE

Design & Implementation of Secure Multi-Site Enterprise Network | April 2025

Architected and deployed a three-tier redundant network for a 500-user enterprise using Huawei eNSP:

- Achieved 99.99% theoretical availability by implementing VRRP gateway redundancy and HRP active-standby firewall high availability with sub-3-second failover
- Eliminated single points of failure across HQ (Dubai) and branch (Karachi) network infrastructure
- Secured inter-site traffic with site-to-site IPsec VPN using AES-256 encryption and IKEv2 protocol (Phase 1 & 2)
- Optimized network performance through VLAN segmentation, reducing broadcast traffic by 70%, and implemented MSTP for per-VLAN load balancing
- Configured defense-in-depth security with zone-based policies (Trust, DMZ, Untrust zones) and NAT Server for secure public service access

TryHackMe Security Labs & Incident Response Training | Dec 2025 – Present

Completed hands-on security courses with practical cyber defense scenarios:

- Analyzed PCAP files using Wireshark to identify and classify malicious network traffic patterns
- Investigated simulated SOC alerts and suspicious log activity; triaged and responded to security incidents
- Practiced firewall configuration and network defense concepts in lab environments
- Applied structured incident response procedures (detection, analysis, containment, eradication, recovery)
